

Project in Android Development

236272 // Spring 2024/25

Second Sprint

Submission & Presentation

Introduction

We're approaching the end of our course, and it's time **to wrap up your project!** By the end of this sprint, you will have a complete and working application, and it will be available for everyone.

This document details the structure of your Sprint 2 (and final) submission – **read it carefully** and make sure that you didn't forget to do anything, as we won't be able to give any extensions this time.

Versioning and Breaking Changes

During the continued development of your application, you may have introduced breaking changes to the application, database architecture, or other components of your app. In the workshops, we've outlined considerations on how to deal with such breaking changes in the context of our development process.

Note: both your app versions (1.x.y and 2.z.w) should continue working (= should never crash) after the end of the sprint, even at the expense of no user migration, and no data sharing.

Usage Considerations

After the end of the course, the application will continue to be hosted on Google Play, out of Technion's responsibility (unless it will be abruptly removed by Google due to violation of Play Store terms and conditions). In addition, the application's source code will remain in the GitHub repository given to you by the course staff (until another decision by the Technion). Any further usage of the application by the team members will be subject to the agreement of **all** team members, and the course staff (and the Technion) will not be involved in such considerations.

Requirements

App version

In your **pubspec.yaml** file, update your app version as seen in the Google Play Workshop, such that it follows the format **2.x.x**.

App signing

Make sure that you sign your app files with **the same key** as in the first sprint. Otherwise, you won't be able to upload your new app files to Google Play!

Copyrights, Privacy Policy and TOS

Please note that one or more of these legal documents **may have changed** during your second Sprint. You should make sure that your legal files are up-to-date – otherwise, you'll have to update the links provided to Google Play during your Sprint 1 submission. **Violation of these requirements may result in the removal of your app from the Play Store. In such a case, your grade will be reduced.**

Testing

Your app should be tested properly by yourselves to make sure it functions as expected. We also expect that you will ask your friends and families to download your app and give you feedback. We highly recommend that the testing is done with your final **release-apk** rather than the standard **debug-apk**.

“Any submission of the debug version will not be accepted”

- Ido & Reem 24.01.24-

General Note

Follow the checklist given in the Google Play Workshop to make sure you didn't forget anything – there are some requirements that we didn't mention here but did mention in the workshop.

Submission

The submission for the second (and final) sprint consists of 4 parts:

1. Frozen Release Branch

Branch out of your **development** branch to a new branch with the name: **release/2.0**.

This is the branch that will represent the code you submit to the second sprint, and it should not be modified after the specified submission date. As a reminder, the Github and Firebase of the project are part of the submission and will affect the grade and will be checked after the meeting (mentors only).

2. Play Store Production

As part of your submission, your app should be uploaded to Google Play under the **production track**. The upload process might take some time (although, hopefully, it would be quicker this time), so you might want to assign a team member that will be responsible for this process. Follow the instructions given in the workshop.

3. APK Submission

You must submit to the **course website** your signed and final **APK** for this sprint, **the exact one that matches the AAB file you uploaded** to the Play Store (compile them together).

4. Meeting & Presentation

As a part of your submission, you are required to create and present a short **slideshow presentation**, detailing the work you have done in this sprint.

This should include:

- An overview of your app's **new** key features and bug fixes.
- A **recorded** demo of your application on **Physical Android Devices - Production release**.

Make sure that your presentation is within **10 minutes** at most(!). We will check your application **separately**, so it has to work on its own.

Time slots for the presentations and the exact date are linked in the submission description. Attendance at your team's submission is mandatory. If the time doesn't suit your team, it is **your responsibility** to inform your mentor before the weekend.

Good Luck!
